

OpenUGRC: Leveraging OpenStreetMap for Statewide Data

Location matters

Erik Neemann
11 May 2022

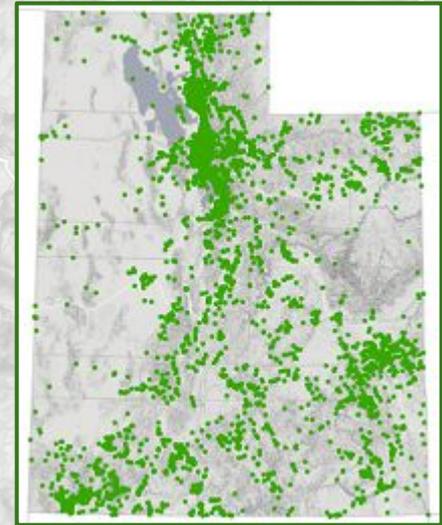

Overview

- **Intro - Utah Open Source Places**
- **Motivation & Uses**
- **More Info & Data Quirks**
- **How it's Built**
- **How to Participate**

Intro - Utah Open Source Places

- New addition to UGRC's Statewide Geographic Information Datasource (SGID)
- Represents places of interest in Utah as point data
 - Tailored toward businesses and community locations
 - Intended to minimize overlap with GNIS Place Names
- Curated from [OpenStreetMap \(OSM\)](#) data
 - Currently contains over 23,800 features
- Updated frequently (every other week)
- Continually growing...over 400 features added since the initial data build in early March
- As a derivative product, Open Source Places carries the OSM data license: [Open Database License \(ODbL\) v1.0](#)

© OpenStreetMap contributors

What's in there?

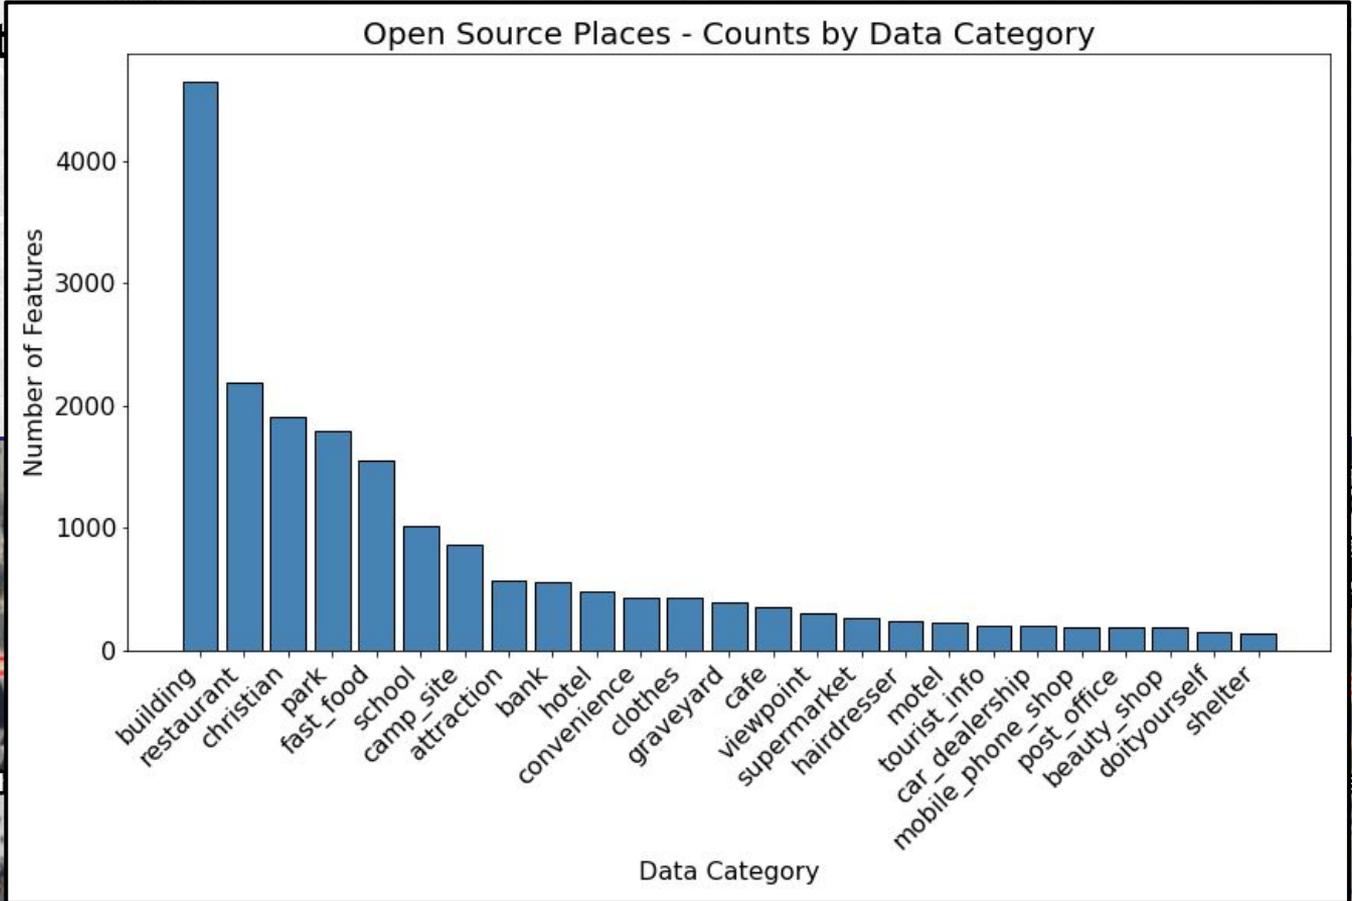

- Almost anything you'll find in OSM data

- businesses
- schools
- viewpoints
- parks
- restaurants
- banks
- car dealerships
- shops
- churches
- hotels
- campgrounds
- attractions

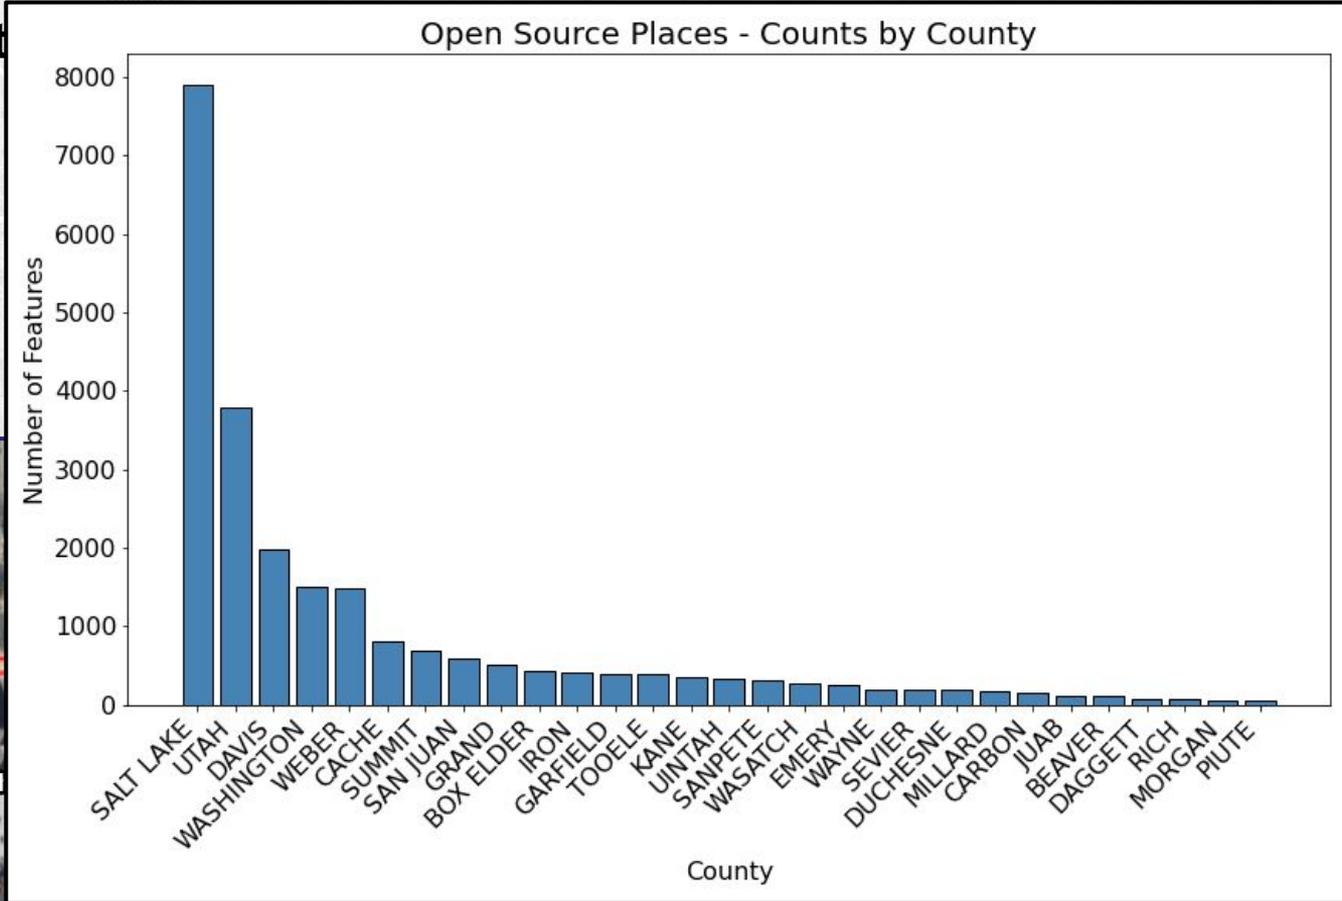

What's in there?

- Almost

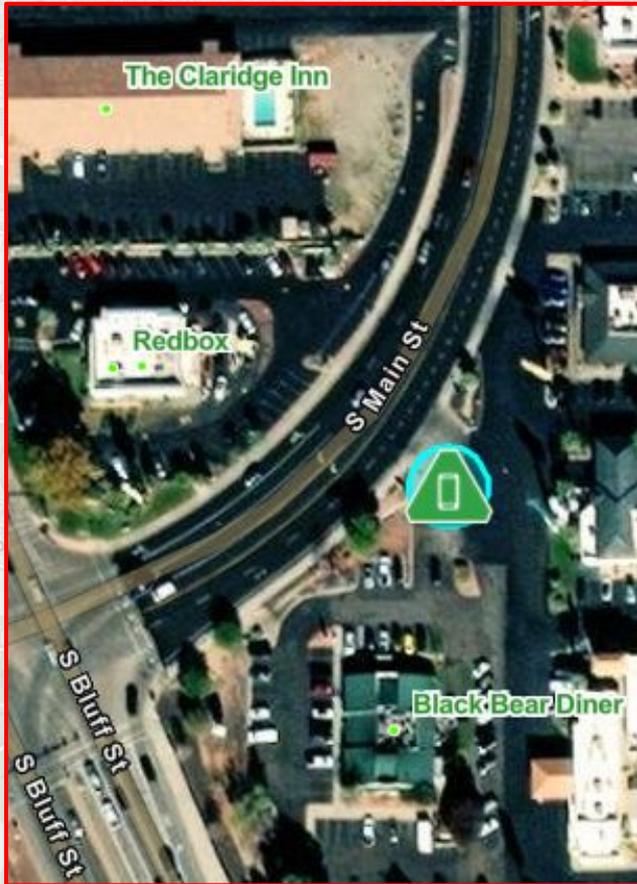

What's in there?

- Almost

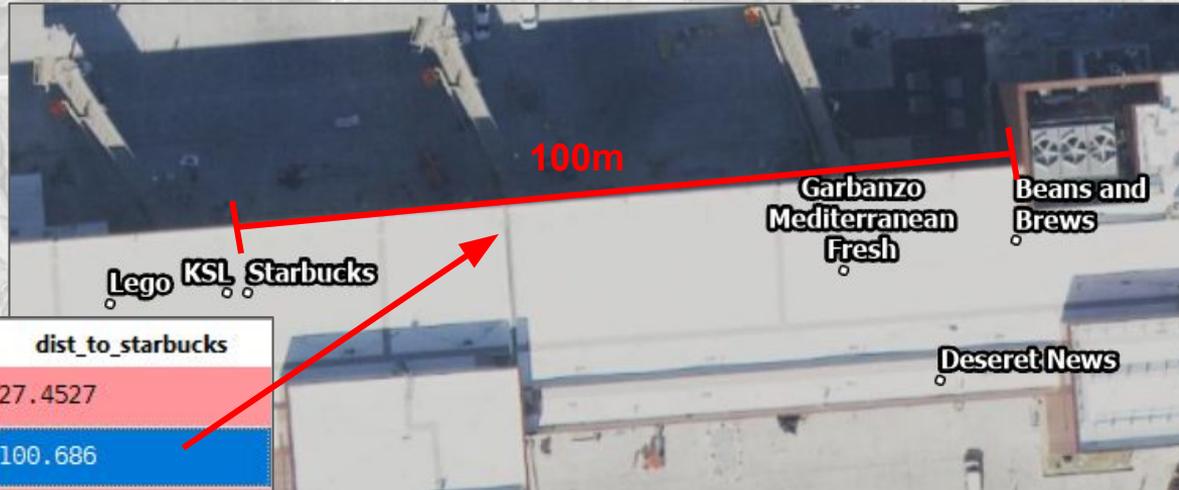

Motivation

- Original idea born out of the need for a statewide "common places" layer that could be used by 911 dispatchers to help locate callers
 - Quickly realized there were many other uses for the data
 - And more reasons to create the data
- Make OSM data more accessible
- Encourage growth of OSM data in Utah
 - Anyone can create an account, add, edit, improve OSM data
- Build upon OSM data with info from UGRC's SGID
- Allow users to directly contribute to a UGRC data layer

How can the data be used?

- Numerous potential uses for government agencies, citizens, researchers
- Analyses of business types or specific businesses
 - What cities have the highest fast food/population ratio?
 - How many Beans & Brews are within a half mile radius of Starbucks?
- Place locations can help 911 call-takers & emergency responders/managers
- Analysis of 'community locations' (tobacco regulation laws)
- Quality control other datasets for missing/closed locations
 - schools
 - fire stations
 - liquor stores
 - cemeteries, etc., etc.

| osm_id | shape | name | dist_to_starbucks |
|------------|--------------------------|----------------------------|-------------------|
| 2403976399 | POINT (426496.6941... | Beans & Brews Coffee House | 27.4527 |
| 8072353912 | POINT (416551.4011... | Beans and Brews | 100.686 |

Other info

- **Similarities to other SGID layers**
 - May include places present in other SGID datasets (parks, school, libraries, fire stations, etc.)
 - Available in variety of ways and formats
 - [ArcGIS Online](#), [OpenData](#), [OpenSGID](#), web services, downloads, etc.
- **Differences from other SGID layers**
 - **Not** authoritative data
 - Different license ([ODbL 1.0](#) instead of our usual [CC BY 4.0](#))
 - Any user can contribute!
- **Main OSM data attributes:**

| osm_id | category | name | amenity | cuisine | tourism | shop |
|------------|------------|-------------------------------------|------------|-------------|---------|---------|
| 3998254042 | cafe | La Barba Coffee | cafe | <Null> | <Null> | <Null> |
| 3998254041 | jeweller | Morgan Jewelers | <Null> | <Null> | <Null> | jewelry |
| 2328421314 | museum | Discovery Gateway Children's Museum | <Null> | <Null> | museum | <Null> |
| 145043325 | park | Olympic Legacy Plaza | <Null> | <Null> | <Null> | <Null> |
| 2327662158 | restaurant | Flemming's Prime Steakhouse | restaurant | steak_house | <Null> | <Null> |
| 23335190 | stadium | vivint arena | <Null> | <Null> | <Null> | <Null> |

Data quirks

- Expect some typos, missing locations, closed locations, naming differences, etc.
 - Be creative with definition queries:
name like '%eans%rews%'
- Several locations simply have a category of 'building'
 - Good candidate for OSM edits!
- Often a European 'flavour' to OSM data
 - centre (instead of center, ex: sports_centre, garden_centre)
 - theatre (instead of theater)
 - caravan_site (instead of rv_park or trailer_park)
 - chemist (instead of pharmacy)
 - tyre_shop (instead of tire_shop)
- Up to two addresses are provided
 - osm_addr - address straight from OSM data (25.8%)
 - ugrc_addr - nearest address point (within 25m) from statewide database (59.4%)

| name | |
|----------------------------|------------|
| Beans & Brews Coffee House | ★preferred |
| Beans and Brews | |
| Beans & Brews Coffee House | |
| Beans & Brews Coffeehouse | |

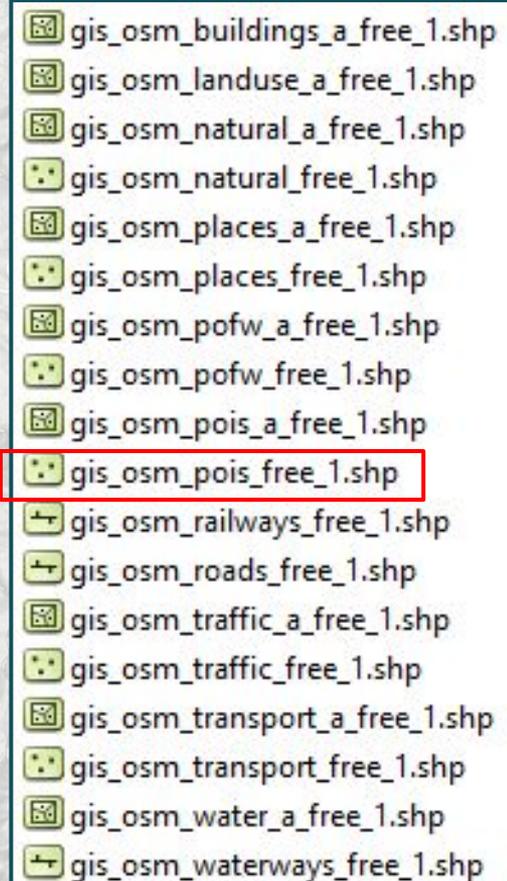

How's it built? - Python script details

- **Nightly OSM archive downloaded from [Geofabrik](#) (18 shapefiles)**
- **Several datasets combined into a single point layer**
 - Specific 'categories' and data attributes are selected
 - **Must have information in 'name' field**
 - Polygons converted to internal centroids
 - Spatial filtering (3 or 10 meters) helps prevent duplicates
- **Attributes are added from SGID polygons**
 - county, city, zip, (census) block_id
- **Nearby addresses are added from SGID address pts**
- **Additional attributes are joined from full OSM data**
 - Pulled via [Overpass API](#) query into pandas dataframe
 - Joined using the 'osm_id'
 - amenity, cuisine, tourism, shop
 - website, phone, open_hours

 - website, phone, open_hours

Python script - data cleanup

- Additional deduplication based on `name` and `block_id`
 - `block_id` field used like a spatial index
 - `name` and `block_id` combined into a single, lower-case string
 - Second or more occurrences of combined string are deleted from final data
 - Prevents two features with same name from existing in the same census block
- Removal of short or numeric-dominated 'names'
 - 'building' is stripped out of the `name` field
 - Feature is deleted if:
 - `len(name) < 3`
 - name is >50% numeric characters
 - Prevents apartment buildings (without context) or homes from appearing
 - 3A
 - 1228
 - Building 2
 - 675B

How to participate?

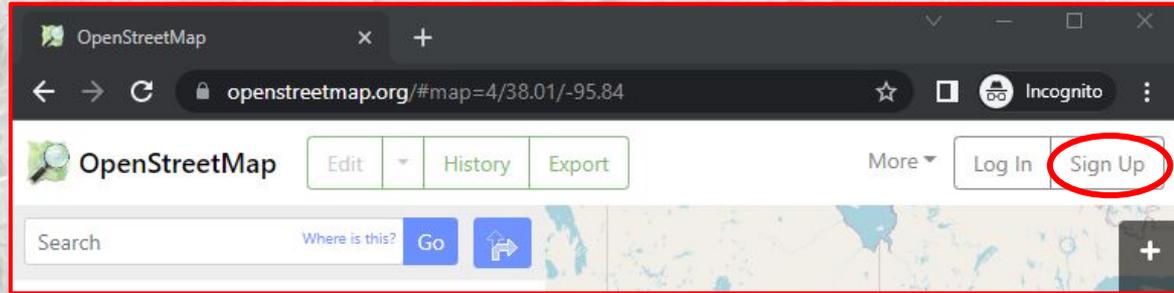

- 1) Create an OSM account
- 2) Log in and make edits

Data Editors

- Web-based iD editor
- Desktop and Mobile (Android and iOS)

How to participate? - Map Roulette!

- Tool that serves random micro-tasks for OSM data improvements
- Challenges are created by users with specific tasks
- Other users can participate and improve the data
- Help 'Improve building attributes in Utah'!

- <https://maproulette.org/browse/challenges/26977>
- Add informational tags (amenity, shop, cuisine, tourism) or specify building type

The screenshot shows the MapRoulette website interface. At the top, there is a navigation bar with the MapRoulette logo, 'Dashboard', 'Find Challenges', 'Leaderboard', and 'Learn'. A user profile for 'eneemann' is visible on the right. The main content area features a satellite map of Utah with several colored circles (orange and green) indicating task locations. To the right of the map, the challenge details are displayed: 'Improve building attributes in Utah', 'Utah Improvements', 'DIFFICULTY: Easy', 'TASKS FROM: April 01, 2022', and links for 'View Leaderboard' and 'Conversation'. A descriptive paragraph explains that the Utah Geospatial Resource Center (UGRC) has built an Open Source Places layer from OpenStreetMap data and is seeking users to improve building attributes by adding tags like amenity, shop, cuisine, or tourism.
